Subject: CES

Kristie:

I have reviewed the Vac Box and Frac Tank Data and this is what I see:

The material in the following containers are hazardous only because the lab could not resolve the contaminants of concern below the regulatory level.

VB640: TCLP - Pesticides, ABN

VB620: TCLP - ABN

FT1002: TCLP - ABN

FT506: TCLP - Pesticides

South Containment: TCLP - Pesticides

I believe that we need to consider using another lab. Accutest seems to be more of a precision lab that does not handle waste samples very well. Please get me a list of labs that are acceptable. I know that a lot of people are using A&B.

Thanks

Thanks
